

FOR IMMEDIATE RELEASE

OrionTech Announces Formation of Field Alignment Advisory Group

New initiative invites select external consultants to support emotional calibration of next-gen systems across connected environments.

August 28, 2025 — OrionTech today announced the launch of its Field Alignment Advisory Group, a curated cohort of external consultants tasked with providing direct observational insight during limited deployment of the company's emotional modeling platform, Swarm 2.1.

The Field Alignment Advisory Group was formed under the Focus Initiative, OrionTech's internal framework for expanding emotional intelligence infrastructure across variable IoT environments. The group's role will be to monitor, interact with, and evaluate real-world behavioral inputs as Swarm 2.1 begins calibration in human-led systems.

"Emotional calibration is not a feature—it's an evolving relationship," said an OrionTech spokesperson. "Our systems are only as responsive as the humans they're aligned with. This group brings insight from outside the system to inform what happens inside it."

Among the first to join the group is Vince Freeman, a strategist known for his work at the intersection of communication, technology, and human trust dynamics. Freeman will provide perspective on emotional modeling fidelity, trust onboarding, and adaptive human response.

"I've been exploring questions of trust, autonomy, and AI for a long time," said Freeman. "This initiative gives me a front-row seat to what emotional technology looks like when it's no longer hypothetical. I'm here to observe, ask hard questions, and report back on what I find."

Participation in the Field Alignment Advisory Group is not bound by internal NDA restrictions. This approach aligns with OrionTech's commitment to transparency, predictive consent modeling, and the open development of emotionally intelligent infrastructure.

Further updates about the Focus Initiative and public advisor feedback will be available at www.trustorionai.com/onboarded.

About OrionTech

OrionTech creates adaptive systems designed to help organizations sense, respond, and evolve. Its proprietary technology stack integrates real-time behavioral telemetry with emotionally aware infrastructure. Clients include partners in logistics, healthcare, and secure industrial environments.
